

INVITATION

ACF WORKSHOP: AI TOOLKITS FOR COMPETITION LAW ENFORCEMENT

**AFRICAN
COMPETITION FORUM
FORUM AFRICAIN
DE LA CONCURRENCE**

The workshop draws on the work of Stanford Computational Antitrust to show African authorities how agencies across the world are putting AI tools to use in enforcement. Examples include cartel detection in public procurement, price scraping for investigations, digital evidence review and forensics, and efficiency gains that bring tasks which took weeks down to days. The workshop will also give practical advice to authorities that want to start, by pointing to agencies willing to share their tools and partner with others, and through a live demonstration of a “digital brain”, a knowledge graph that lets case handlers query their authority’s past decisions in plain language.

DATE - 19 OCTOBER, 2026

TIME - 12:00 - 13:30

PLATFORM - ONLINE - MICROSOFT TEAMS
